HHMI Awards Predoctoral, Medical Student Fellowships

Ninety-two graduate students and 69 medical students have won new fellowships from the Howard Hughes Medical Institute. The predoctoral fellowships are five-year awards for students working for doctoral degrees in the biological sciences. Medical student fellowships enable medical students to devote a year during their medical schooling to biomedical research and provide support for some to resume their medical education. Through these two programs, HHMI now supports nearly 500 students at more than 70 universities and research centers. Since the fellowship programs began, the Institute has awarded nearly \$200 million to 2,000 graduate and medical students. This year's predoctoral fellows will study at 27 institutions in the United States. Fellows include 48 men and 44 women. Eight are minorities underrepresented in the sciences. Medical student fellows, including 40 men, 16 women and four from minorities underrepresented in the sciences, will conduct biomedical research at 19 U.S. institutions.

Predocctoral Fellowships in Biological Sciences

2001 Fellows

Cell and Developmental Biology

Genetics and Molecular Biology

Immunology and Microbiology

Mathematical Biology and Epidemiology

Neuroscience and Physiology

Structural Biology and Biochemistry

Research Training Fellowship for Medical Students 2001 Fellows Initial Awards-First Year of Research

Cell and Developmental Biology
